

IT SECURITY

Forget your passwords

Single Sign On

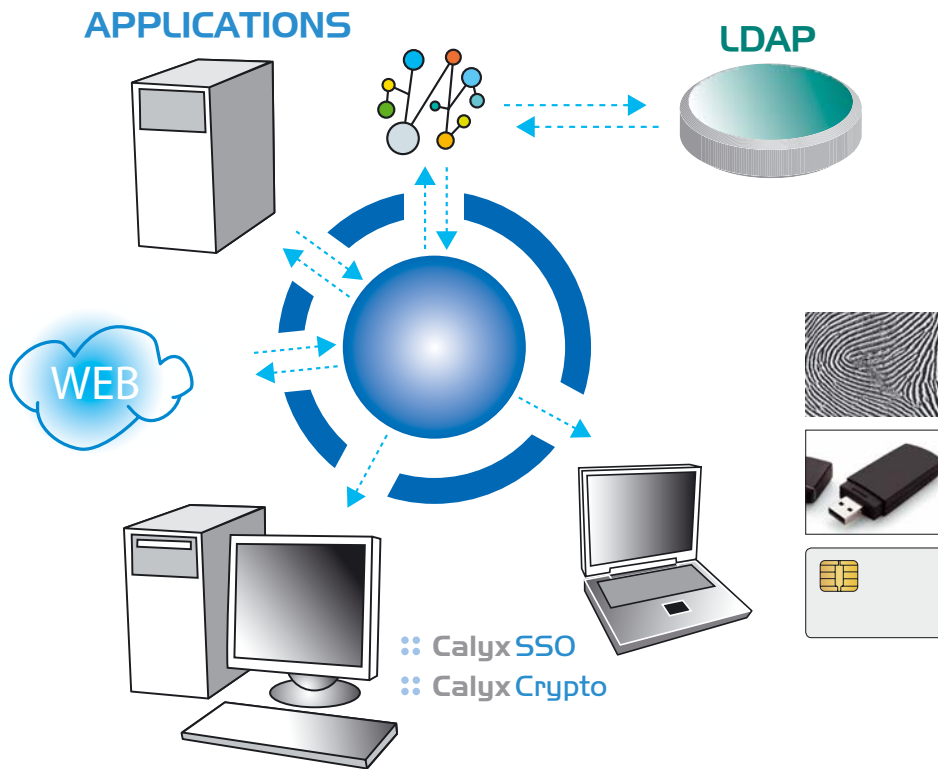

Secure Workstations

Data Confidentiality

- Access control to workstations or laptops, protection of confidential data, secured access to server, applications and the Internet
- Independent and complementary application modules to meet enhanced security requirements
- Access control, IT and Remote Sites security policy management
- Simplifies user's life while enhancing global security

SERVER :: NetAdmin

Features

- Single Sign On
- IT Access control
- Authentication
- Personal Firewall
- Electronic Signature
- Email and Folder Encryption

Standards

- Mifare
- PCSC
- ISO7816
- PKCS #11

Support

- Windows
- Linux
- Novell
- Oracle
- SAP GUI
- SQL Server
- Lotus Notes
- Citrix MetaFrame
- CheckPoint SecuRemote

:: Calyx SSO

Single Sign On to workstations, networks, servers and applications. In order to increase the security level, Calyx SSO also works with:

- Smart cards,
- USB keys,
- Biometric readers

Username and passwords are taken out of the chosen device so they are invisible to the user and allow increased security by enforcing complex passwords. Calyx SSO also controls and manages user rights and system access.

:: NetAdmin

Centralised administration and remote configuration tool, NetAdmin allows you to perform the deployment and parameter setting of the entire Calyx Suite.

Administrators can set up and manage users, workstations or groups of workstations from one or several remote consoles.

NetAdmin is compatible with LDAP directory architecture.

:: Calyx Crypto

Guarantees data security, confidentiality and integrity. Specific directories ensure the automatic on-the-fly encryption of data stored on the computer, on the network or on an external device (USB key or others), thus ensuring their confidentiality. Session keys can also be stored on a smart card or a USB key, or can be unlocked by the use of a fingerprint.

Encryption / decryption operations are transparent to the user.

Calyx Suite is registered trademark of Oikialog
